

Driving Question : Do Students Use AI More For Academic or Personal Purposes

Roshan, Joshua, Soume

Claim : Students primarily use AI as a dual-purpose tool, it has seamlessly integrated in both academic and personal life decisions of a student, but students tend to favor the use of it for academics.

Limitations

Getting people to answer truthfully was the hardest part of gathering data for this presentation. We feared that many would not give us accurate information out of fear that this data may circulate and that they will face consequences for the use of AI. Considering this, we stressed that everything would be anonymous and that the data will only ever be used for this purpose of comparing for this presentation.

What Do Students Mainly use AI For?

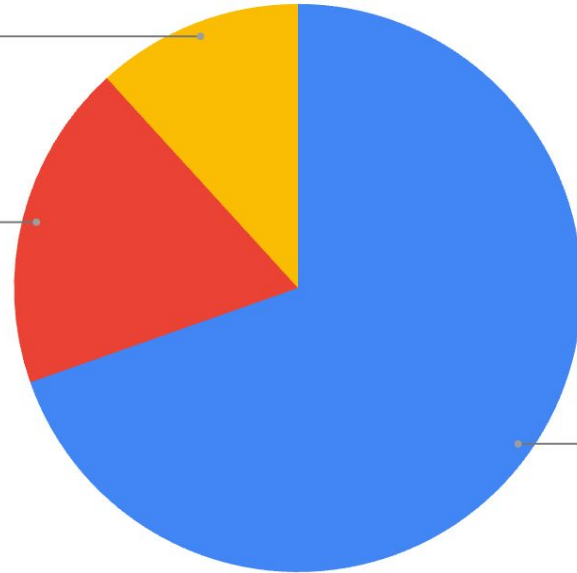

Out of a 102 students 69% of them stated they used AI for both personal and academic reasons. Although this may not fully answer the driving question, it still shows the versatility of AI. The following pieces of evidence will specify what students mainly use AI for.

What Do Students Mainly Use AI For?

Mostly personal
11.8%

Mostly academics
18.6%

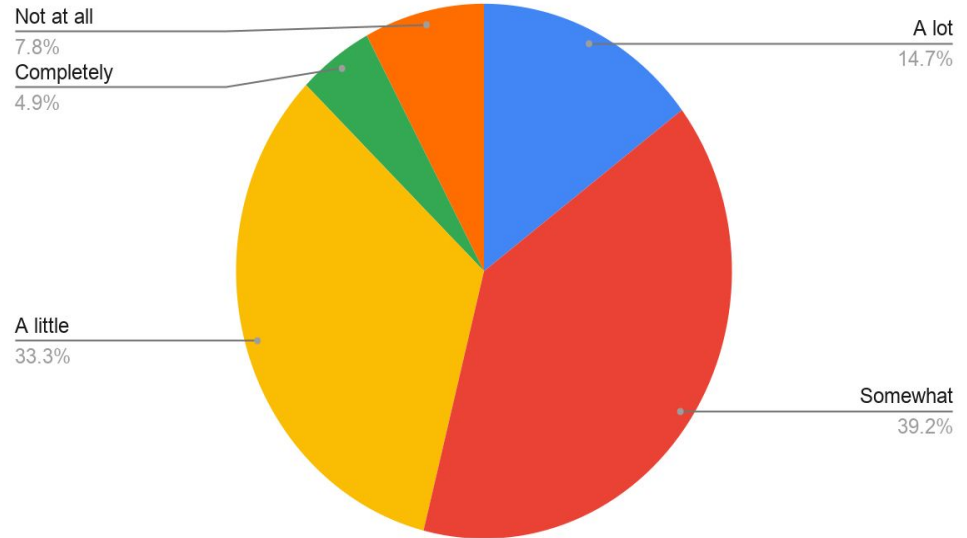

A mix of both
69.6%

Evidence 1: How Much Do Students Rely on AI For Schoolwork ?

This data shows how many students use AI for their schoolwork. Being reliant or not is a different question ,but it also shows that 39.2% of the students are somewhat reliant on the use of AI for their schoolwork.

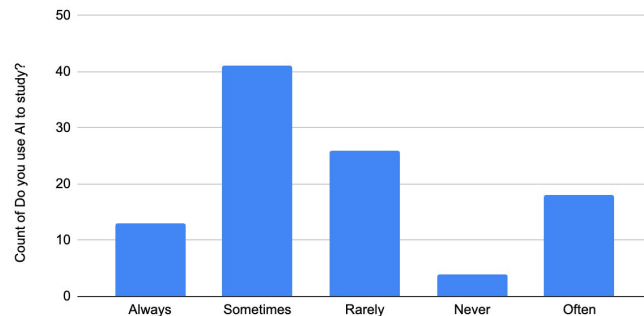

Count of How much do you rely on AI for schoolwork?

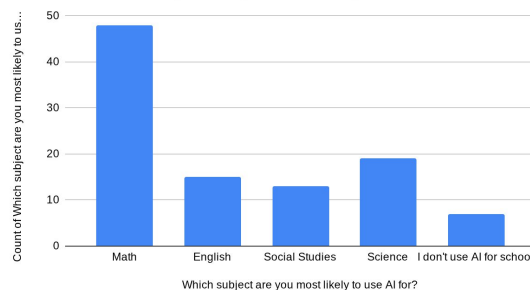

Evidence 2: How Often is AI Used to Study and Which Subject Students are Most likely to use AI On?

With such a low percentage that have never used AI to study shows how AI is used more academically along with the second set of data which shows students would use it more for Math followed by science which many can agree are difficult subjects. Both of these data sets show how AI is used academically and what exactly it is used for. It also strengthens the claim that AI is used more academically because there is a small percentage that doesn't use AI in school.

How Often Do Students Use AI To Study

Count of Which subject are you most likely to use AI for?

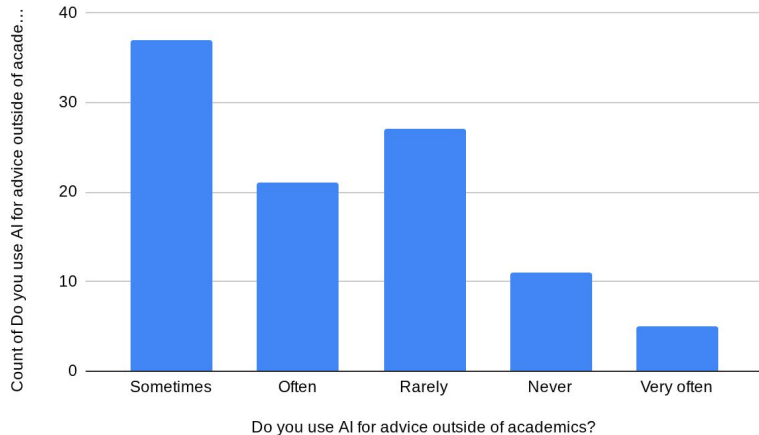

Evidence 3: Do students use AI for Advice Outside of Academics

With more than a quarter of responses stating they would never and 38 responding sometimes means ultimately students use AI more for academic use.

Only 11 students said they never use Ai for outside of academic reasons showing Ai might not be the first choice of students to get advice for outside of academic reasons. All that being said 91 students said they use Ai for advice outside of academic advices either sometimes, rarely, often and very often. This reveals how much AI has integrated in a high schooler's life even outside of school.

Count of Do you use AI for advice outside of academics?

Students Use AI More For Academic Purposes

Based on the survey results, most students use AI for both academics and personal use with a stronger emphasis on academic use. This data shows that many students use AI to study and some do rely on it to complete their schoolwork. Subjects like math and science influence the increased use of AI considering their complexity and difficulty across different courses in which students may struggle in. Students do use AI outside of schoolwork like asking for advice, learning new skills and image creation which shows how AI has a role in enrichment beyond academics.

Overall AI has become a very valuable tool due to its versatility, but students tend to use more for the academic benefits it provides, like using it to study or explain concepts.
